

Web Conferencing - Presentation Manager

This feature allows you to pre-record action steps from within the room and plays them back using a simple to manage interface.

Once you give your script a name, every time you launch something from within the room, that step gets recorded.

Edit Mode

New actions get added to the list below as you perform them. For example loading Slides adds a new row to the list. To reorder, simply drag and drop rows.

Name:

#	Action	Status	Cat	
1	Change Media Tab	White Board	<input type="text" value="v"/>	<input type="checkbox"/>
2	Change Media Tab	Video Player	<input type="text" value="v"/>	<input type="checkbox"/>
3	Change Media Tab	Slides	<input type="text" value="v"/>	<input type="checkbox"/>

Once all of your steps are recorded, you simply have to click on the green play button to launch that action step.

Presentation Manager

This module allows you to prepare presentation workflows. At the time of the presentation, you can run tasks such as starting Slides or launching a poll with one mouse click.

- Friday Afternoon
- Monday Morning
